

## How to transfer waypoints from MapCreate™ 6 to your GPS

This is a quick reference guide to help you insert waypoints and then successfully transfer the waypoints from MapCreate 6 to your GPS unit. Please print this out and refer to it when you want to transfer the waypoint data. This procedure assumes that you have the software installed on your computer already, and also that the MMC/SD reader is plugged in to your computer with the MMC/SD card inserted in the reader. **\*NOTE:** If you have Windows® 98, then you also need to load the drivers for the MMC/SD reader. The drivers are located on the West CD. Do not load these drivers if you are running an operating system other than Windows 98.

1) Open MapCreate 6.

2) At the top of the screen where it says File, Edit, Insert, etc., click on Insert. Highlight Waypoint and left click. Now an Insert/Edit Waypoint box appears. From here you can enter in your coordinates, name the waypoint and choose a symbol. After you have fully entered in the information, click on OK. Repeat this step until all of the waypoints that you want to transfer are entered in.

3) Now that all of the waypoints are entered, click on File at the top of the screen. Highlight Save GPS Data File As and left click. A Save As screen will appear. At the top of the Save As screen where it says Save In, make sure it says **Removable Disk** to the right of that. If it does not say **Removable Disk**, be sure to change it so it does. Now in the File Name section, type in a name and then click on Save. All of your waypoints are now on the MMC/SD card. They have been saved there as a User Data File.

4) Insert your MMC/SD card in your GPS. Turn on the GPS. Press Menu twice. Highlight System Setup and press Enter. Highlight Transfer My Data and press Enter. A box will appear that will say "Transfer data which way? Save or Load;" select Load and press Enter. Now you should see a menu displaying the user data file name that you named your waypoints with, and a Load Data box appears below it. Highlight Load Data and press Enter. A message will appear that says "User Data Loaded Successfully." Now all of the waypoints should be loaded on the GPS unit.

If you need further assistance, call Customer Service in the U.S. at 800-324-1356. Call Customer Service in Canada at 800-661-3983.
